

**Day 2:
Session 6**

Green and digital skills

Green and digital transformation

NQF Consultation Week

21-24 May 2024

Eduarda Castel-Branco

01

**Green and digital
skills – in-demand**

Green-enabled recovery and growth

- Green with a touch of brown is the colour of recovery
- Greening of the economy and society – at heart of post-Covid19 recovery strategies and growth in many countries
- **Green growth opportunities abound across massive sectors such as energy, mobility, and agriculture.**
- Just as digital-economy companies have powered stock-market returns in the past couple of decades, so green-technology companies could play that role in the coming decades.
- EU, US, China, Japan, South Korea's Green New Deal, Canada, Africa – green stimulus packages

Major implications for jobs, education, training and skills;

- need to develop **environmentally friendly** technologies, production processes, products, services, and business models across all sectors of the economy;
- It changes the way **traditional occupations** are performed (and taught) and creates **new occupations**;
- It creates a demand for new skills and knowledge and the need to **upskill** and **reskill** large numbers of people;
- need to increase **environmental awareness** in education and training curricula;
- requires close interaction between education and training systems and their environments to build **skills ecosystems** in which skills development goes hand in hand with economic, technological and social change.

Green transition drives job growth

Future of Jobs

Green transition drives job growth

Expected impact of trends on jobs:

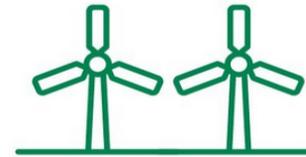

Including jobs such as

Sustainability specialist

Solar energy installation and system engineers, and

Renewable energy engineers.

Greener jobs future

- To compensate for expected job losses, global efforts to decarbonize in response to the climate crisis are giving rise to a wealth of green jobs across sectors and industries.
- A green-recovery scenario could generate around 3.5% of additional global GDP growth and a net employment gain of 9 million new jobs each year, according to International Energy Agency data.
- The green transition could **create 30 million jobs globally in clean energy, efficiency and low-emissions technologies by 2030.**
- But while there has been continued growth in green jobs for the past four years, **reskilling and upskilling towards green skills is not keeping pace.**

<https://www.weforum.org/agenda/2023/04/future-jobs-2023-fastest-growing-decline>

02

**What is the labour market demand for -
green and digital skills?**

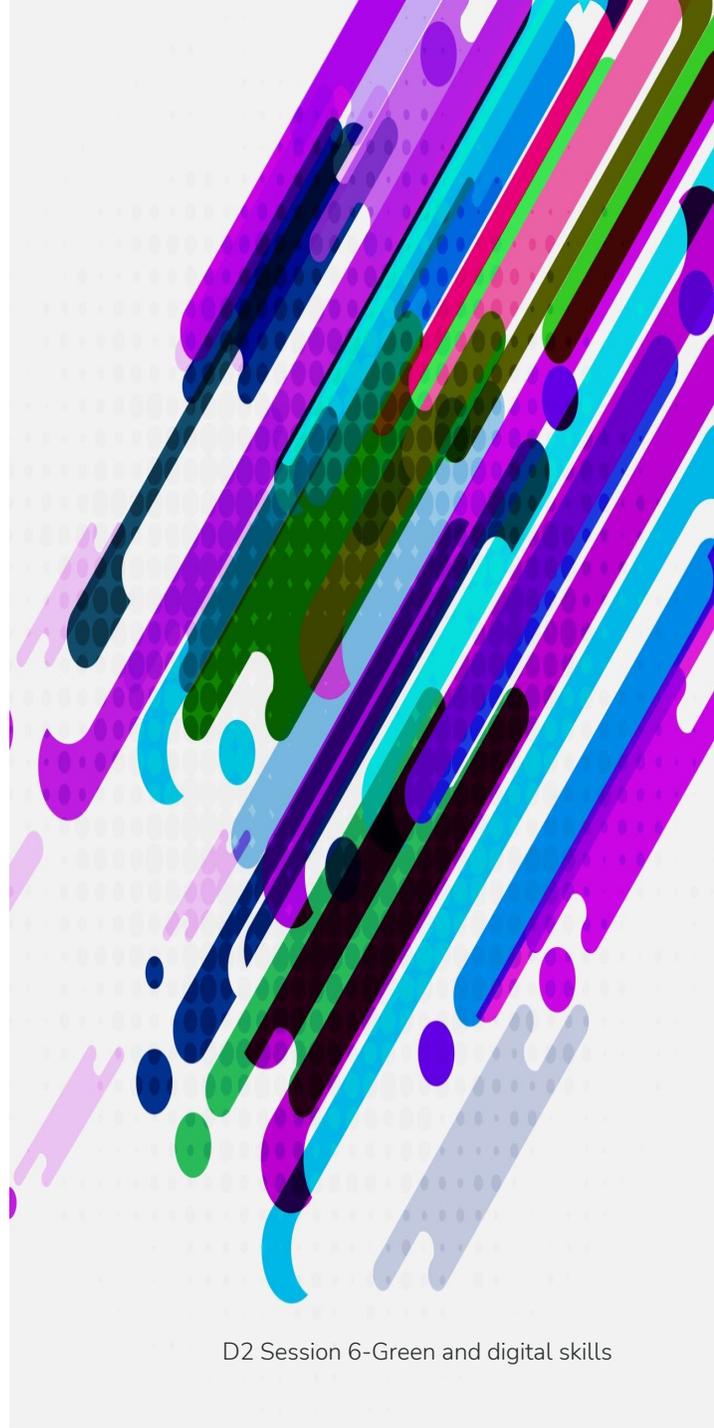

**Based on a data of ETF Big Data LMI
project (ex.: Egypt, Kenya)**

Green skills Demand

ETF Data – Online Job Vacancies Kenya, Egypt

Definitions

Green skills – an important area of debate and policy action and which has become a priority in research (quantitative and qualitative) and social communication. Several international organisations are working on the analysis and taxonomies related to green competences.

Cedefop defines green skills as "the knowledge, skills, values and attitudes needed to live, work and act in economies and societies that seek to reduce the impact of human activity on the environment".

Skills for the green economy consist of:

- **transversal skills**, linked to sustainable thinking and acting, relevant to all economic sectors and professions;
- **specific skills** needed to adapt or implement standards, processes and services to protect ecosystems and biodiversity and reduce energy, materials and water consumption;
- **highly specialised skills** needed to develop and implement green technologies such as renewable energy, wastewater treatment or recycling;

Skills for the green economy are also referred to as skills for green jobs, skills for the green transition or green skills.

Analysis of demand for skills: online job vacancy data

- New dashboards @ ACQF Website:

<https://acqf.africa/skills-data-focus/online-job-ads-analysis-dashboard>

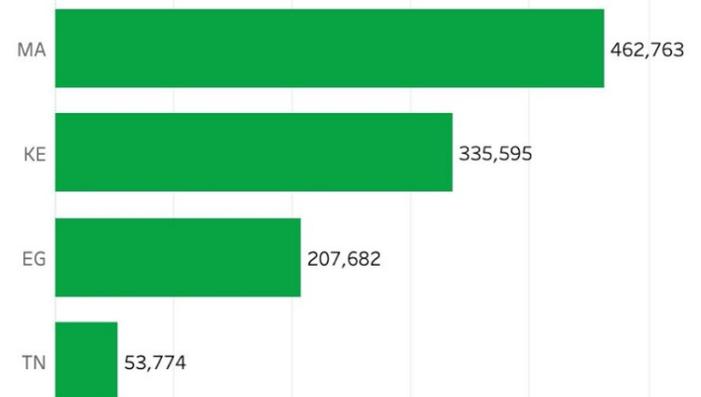

Number of job vacancies collected

4,091,209

Number of job vacancies deduplicated

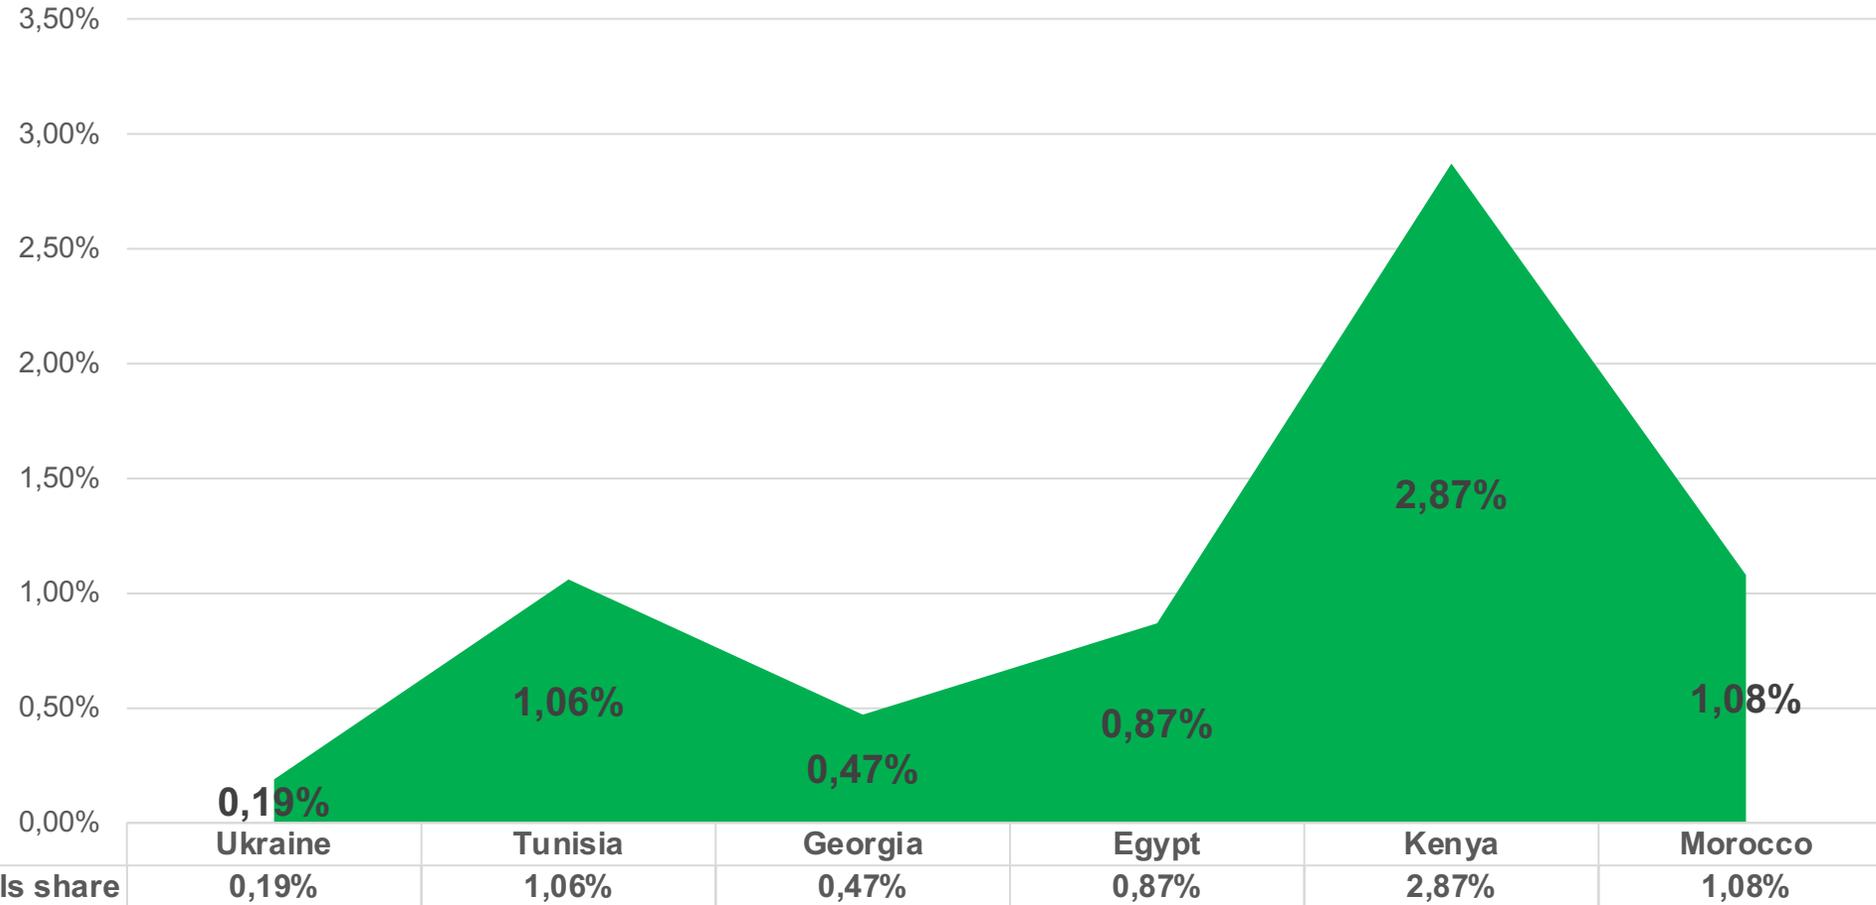

1,059,059

Number of unique Vacancies by Country

ETF project: Online job vacancy – Big data for LMI

Green skills share - data updated until 31/12/2023

Green skills share = share of online job vacancies that required at least 1 green skill

Kenya: highest green skills share, Ukraine – the lowest

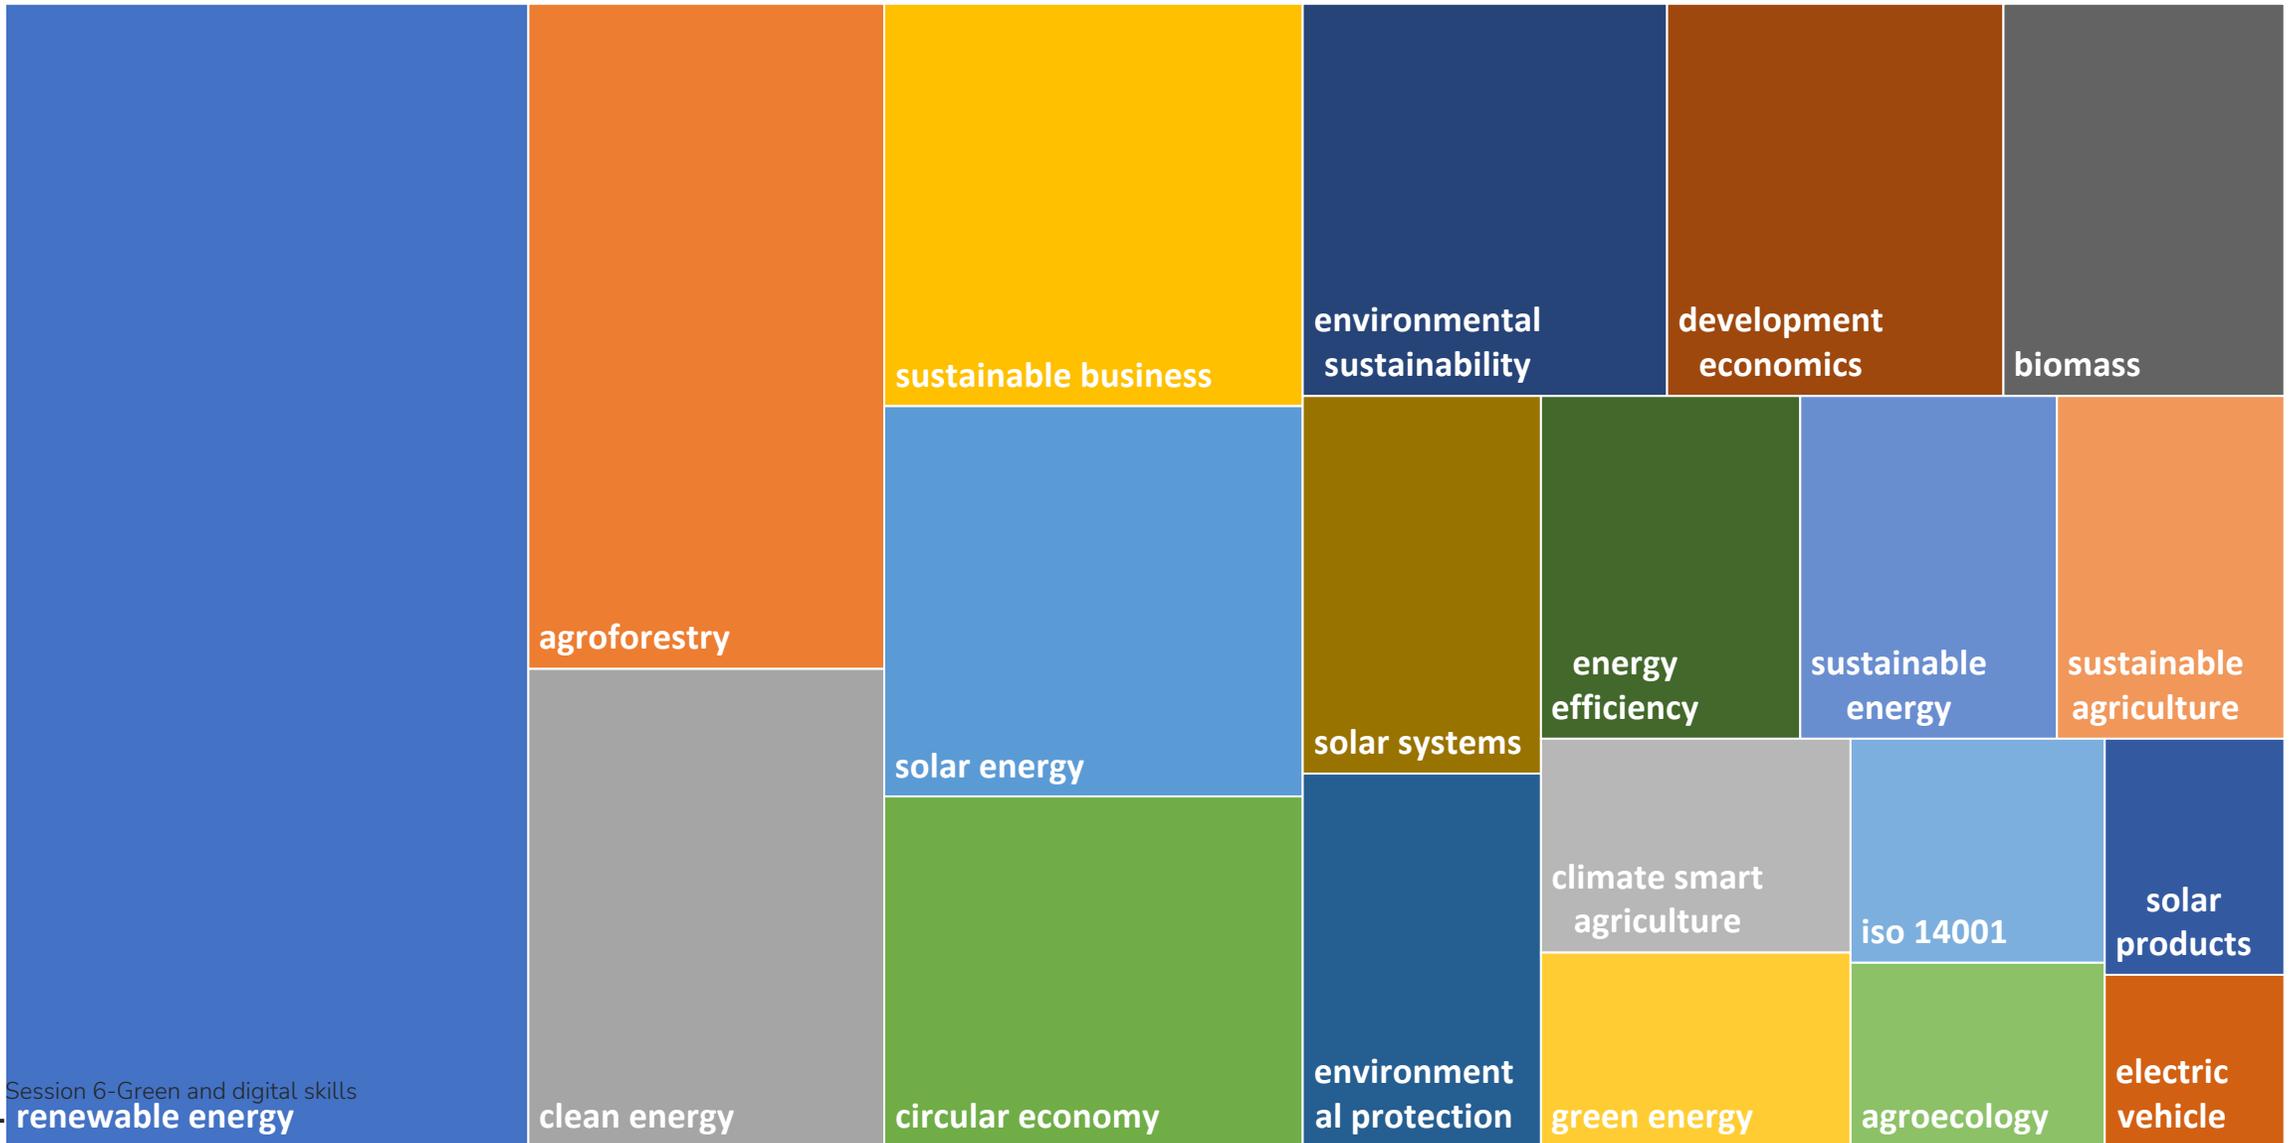

Used green skills taxonomy: ETF (225 terms)

Top 20 Green Skills Kenya

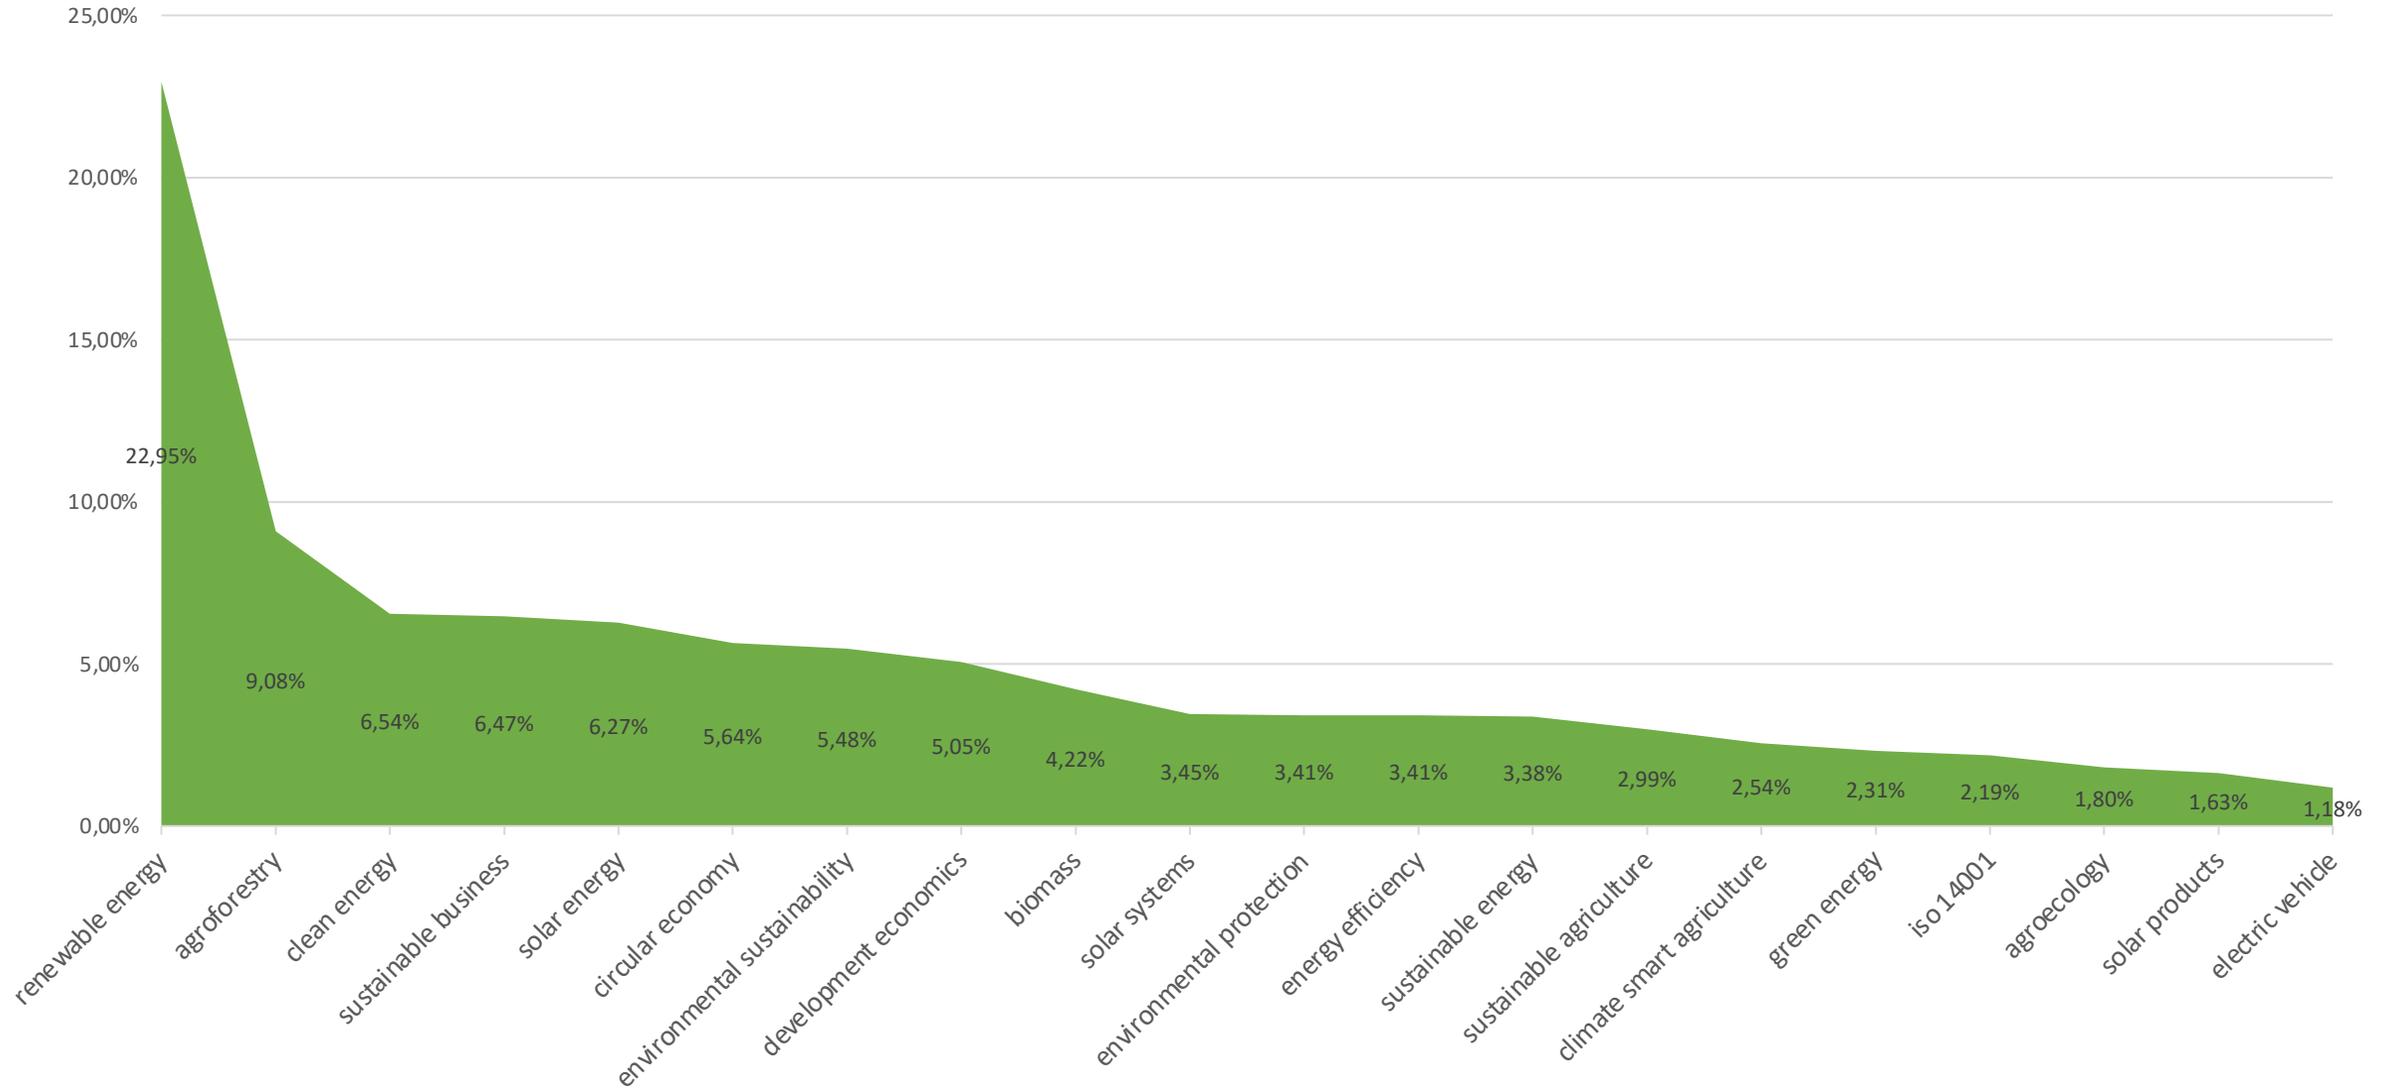

Skills / skill set	% (from 20)	Nº unique job postings
